

Specified Collapsible Water Dam

Shall be one inch in height, white in color, triangular shaped with water resistant strip integrated into recessed base channel for a flush adhesion to the shower floor. Water dam shall collapse under foot or wheelchair and shall provide maximum water control when coupled with a weighted shower curtain. The dam shall be a lab tested, non porous surface, meeting all anti-bacterial requirements of health care facilities. Collapsible water dam shall include matching white end caps model EX-1613 for shower applications with radius corners or model EX-1615 for shower applications with square corners for a watertight seal and tailored finish. For radius corner showers, the retainer size shall be the length of the inside opening of the stall plus six inches to allow dam to travel up the corner radius to a vertical position to assist the curtain to control water spillage in each corner. Water dam shall be provided for showers (Insert fixture #) by KR Specialties Inc. Ph:(781)422-2273
