

# Collapsible Shower Dam

Control water spillage and increase shower safety

**KR Specialties' Collapsible Shower Dams** help prevent falls and reduce facility liability and maintenance. Developed and patented specifically for all types of barrier-free curbless shower units which require water control. White in color, one inch in height, our water dam collapses easily by foot or wheelchair. Durable and easy to clean. Strong, water-resistant, self-adhesive tape eliminates the need for messy adhesives. Optional curved or square corners complete the watertight seal. For showers with curved corners, the flexible barrier can be extended vertically up the shower wall to help the shower curtain seal in the corners to provide the best water containment.

**Patented features** include a recessed channel housing a commercial-grade 3M self-adhesive tape for easy peel and stick installations on alcohol-cleaned surfaces. The outer edge design provides a flexible gravity seal which allows the dam to flex while eliminating the need for messy caulking.

Our collapsible shower dam is designed specifically as a solution to water spillage in all types of curbless, barrier-free and ADA showers, including acrylic, fiberglass, solid surface, and ceramic tile. Our shower dam is US Lab certified and meets all antibacterial requirements of healthcare facilities.
